NAME
curl_global_cleanup - global libcurl cleanup

SYNOPSIS
#include <curl/curl.h>

void curl_global_cleanup(void);

DESCRIPTION
curl_global_cleanup must be called once (no matter how many threads or libcurl sessions that'll be used) by every application that uses libcurl, after all uses of libcurl is complete.

This is the opposite of *curl_global_init(3)*.

Not calling this function may result in memory leaks.

SEE ALSO
curl_global_init(3),
