NAME

      curl_multi_cleanup - close down a multi session

SYNOPSIS

      #include <curl/curl.h>

      CURLMcode curl_multi_cleanup(CURLM *multi_handle);

DESCRIPTION

      Cleans up and removes a whole multi stack. It does not free or touch any individual easy handles in any way - they still need to be closed individually, using the usual *curl_easy_cleanup(3)* way. The order of cleaning up should be:

      1 - *curl_multi_remove_handle(3)* before any easy handles are cleaned up

      2 - *curl_easy_cleanup(3)* can now be called independently since the easy handle is no longer connected to the multi handle

      3 - *curl_multi_cleanup(3)* should be called when all easy handles are removed

RETURN VALUE

      CURLMcode type, general libcurl multi interface error code.
